

Design Pattern: Distributed Data Repository

Version 13

Published 7/19/2017 by [IOAKB_Community_Manager](#) Last updated 5/31/2019 12:39 AM by [tbonnemann](#)

Step two of the [Data Blueprint](#) is the Distributed Data Repository. It solves for data availability by placing a global namespace over the edge nodes and extending that into various clouds as appropriate. It also demonstrates how to optimize for high availability and data protection.
