

Ecosystem Blueprint

Version 14

Published 8/8/2017 by [tpeluso](#) Last updated 5/14/2018 4:59 PM by [tpeluso](#)

Summary

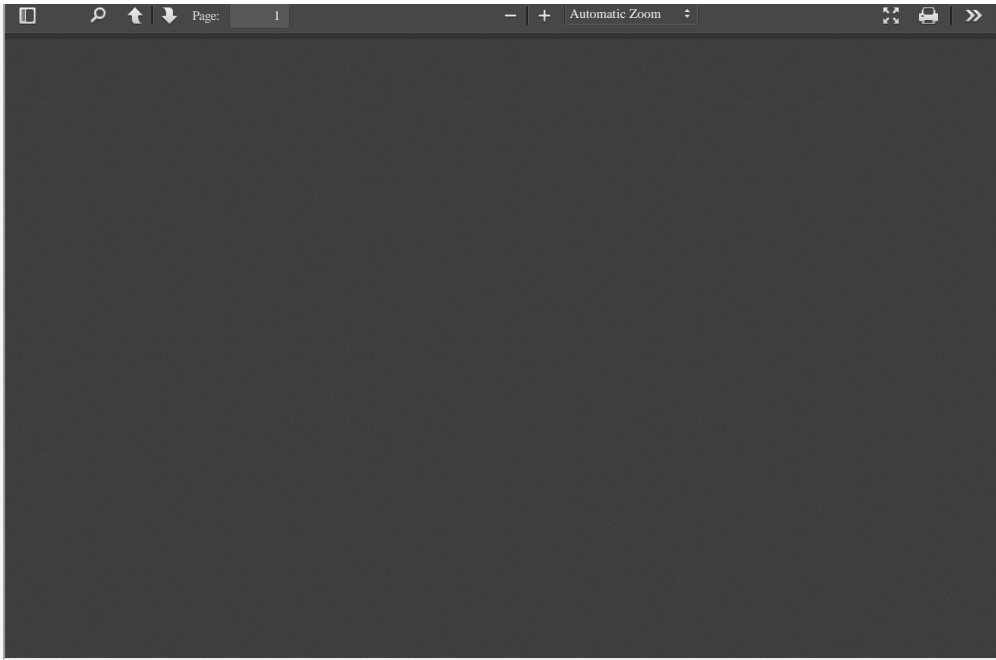

This document shows you how to programmatically discover regional services that enhance value proposition while complying with regional mandates in real time. The result is the ability to virtually rewire to a rich global value chain in response to business pressures as needed.

Your situation

Barriers of traditional one-to-one connectivity to partners present a particular challenge. You require a way to easily finding and then establishing one-to-many connections to a digital business ecosystem of compatible and complementary service partners in any region.

Capabilities include

- Create new partner value chain connections via automated API service discovery across regions; rapidly connect and combine services
- Reduce response time for transactions
- Regulate business collaboration while maintaining business differentiation
- Leverage fast, secure, reliable multicloud resource pools to run new services in targeted regions
- Align costs with business growth, adjusting resource allocation to on-demand needs
- Enforce regional compliance rules at wire speed
- Enhance reliability with distributed failure recovery
